Information about the speaker

Aaron von der Heyden studied civil engineering at TU Darmstadt and Virginia Tech (VA, USA). After two years of working as a structural engineer, he spent five years as a research assistant at the Institute for Steel Construction and Materials Mechanics at TU Darmstadt. The goal of his research work was the assessment of the implementation of corrugated cardboard as a core material for sandwich panels as building envelopes. Since November 2019 he works as a project manager in the bridge construction department of the Donges SteelTec GmbH in Darmstadt.
